Objective

Third-year B.Sc. (Hons) Computer Science undergraduate (GPA 3.85) seeking a AI/ ML/ Computer Vision internship to apply machine learning, deep learning, and computer vision techniques using Python, TensorFlow, and scikit-learn to solve real-world problems and contribute to intelligent systems.

Education

Degree

- o B.Sc. (Hons) in Computer Science (third year undergraduate) at Saegis campus.
- o Current GPA: 3.85 / 4.0
- o Graduation Year- 2027

School Education

- o A/L- C2, S1 passes in Engineering Technology of Technology stream.
- o O/L- A4, B1, C4 passes.

Courses

- o Version Controlling (GIT)
- o Django (Python Framework)

Technical Skills

Programming Languages

Python, Java

Machine Learning

scikit-learn, k-Nearest Neighbors (kNN), Support Vector Machines (SVM), Naive Bayes, Model Training & Evaluation, Hyperparameter Tuning, Feature Scaling, Data Preprocessing

Deep Learning

TensorFlow, Keras, Neural Networks, ReLU, Softmax

Computer Vision

OpenCV, MediaPipe, MTCNN, Face Detection

Image Processing

Image Preprocessing, Histogram Equalization, Feature Extraction

Data Analysis

NumPy, Pandas, Matplotlib

Web Development

Django, HTML, CSS, JavaScript, PHP

Databases

MySQL, NoSQL

Tools

Git, GitHub, Jupyter Notebook

Projects

Face Detection Attendance System (Jupyter Notebook)

[Link](#)

- o Built a real-time face detection attendance system using OpenCV and MediaPipe.
- o Used image preprocessing techniques such as grayscale conversion, resizing, and histogram equalization.
- o Designed a similarity-based face matching algorithm using pixel difference metrics.

Deep Learning model for Fashion MNIST Image Classification (Jupyter Notebook)

[Link](#)

- o Designed a 4-layer neural network achieving 88.9% accuracy
- o Designed and trained a neural network using dense layers and ReLU/Softmax activation functions
- o Model accuracy- 88.9%

Face Part Extraction System using Pre-trained MTCNN (Jupyter Notebook)

[Link](#)

- o Computer vision system for face detection and facial keypoint extraction using MTCNN
- o Visualized detected face regions and extracted facial parts using OpenCV and Matplotlib

Machine Learning Model for Diabetes Prediction (Jupyter Notebook)

[Link](#)

- o Using Python (scikit-learn), train_test_split function
- o Trained and compared multiple models: kNN, SVM (RBF kernel), and Naive Bayes
- o Performed hyperparameter tuning for kNN (k=1 to 300) and evaluated using Accuracy, Precision, Recall, and F1-score
- o Achieved 81.8% K-NN accuracy and selected optimal model based on evaluation metrics

Deep Learning Model for Diabetes Prediction (Jupyter Notebook)

[Link](#)

- o Implemented a neural network using Keras and TensorFlow using dense layers
- o Achieved approximately 69% prediction accuracy
